Data Descriptions

Argentina Data

Argentina Import Data

Product Description	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and supplier of specific products you are interested in
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand local markets.
Arrival Date	The date the shipment arrives within the Customs territory of the country.
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
Brand	Declared brand name of the products being shipped. Useful for uncloaking overseas factories, shell suppliers and supply chains
FOB (USD)	Freight on Board: The cost of the goods on the shipment. You can use this to assess the cost when importing/exporting similar products.
CIF (USD)	Cost, Insurance, Freight: The combined FOB Cost, Transportation, and Insurance. Use this to gauge the total cost of transportation for both you and your competitors' shipments.
Freight (USD)	Total cost of freight for the shipment. Use this to estimate shipping costs for similar shipments and to get a look into your competitor's costs
Insurance (USD)	The cost of insuring the commodities involved. Use this to get an idea of how much insuring certain products will cost when shipped.
Gross Weight (KG)	Weight of the shipment including pallets, netting and any other items needed to ship the cargo
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
Product ID	The cost of each unit for the exact product & brand listed. Brand/model identifier for the shipment
Brand ID	
Brand Quantity	
Brand FOB	
Variety	

Acquisition	The country where the cargo was loaded into a vessel
Destination Country	The country where the cargo is to be delivered
Customs	The customs office that received the shipment
Number of Packages	The quantity of packages involved in the shipment.
Incoterms	Incoterms are a set of standards that define the assignment of shipping responsibilities between the buyer and seller. Use this information to see Incoterms arrangements previously supported by companies you are examining
Attributes	Identifiers used for the shipment
Transportation Type	The method of transport used for shipping goods. Use this to determine how each shipment arrives at its destination.
Operation Type	
Control ID	Unique identifier for the shipment
Importer ID	Unique government identifier for the consignee
Measurement Unit	Unit for measuring size of the shipment
Total FOB (USD)	Declared FOB cost
Total CIF (USD)	Total CIF cost for all cargo in the shipment.

Argentina Export Data

Product Description	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and supplier of specific products you are interested in
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
FOB (USD)	Freight on Board: The cost of the goods on the shipment. You can use this to assess the cost when importing/exporting similar products.
CIF (USD)	Cost, Insurance, Freight: The combined FOB Cost, Transportation, and Insurance. Use this to gauge the total cost of transportation for both you and your competitors' shipments.
Gross Weight (KG)	Weight of the shipment including pallets, netting and any other items needed to ship the cargo
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
Brand Quantity	Brand Quantity
Customs	The customs office that received the shipment
Number of Packages	The quantity of packages involved in the shipment.

Transportation Type	The method of transport used for shipping goods. Use this to determine how each shipment arrives at its destination.
Operation Type	Operation Type
Destination Country	The country where the cargo is to be delivered
Control ID	Unique identifier for the shipment
Measurement Unit	Unit for measuring size of the shipment
Total FOB (USD)	Declared FOB cost
Total CIF (USD)	Total CIF cost for all cargo in the shipment.

Bolivia Data

Bolivia Import Data

Product	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and suppliers of specific products you are interested in
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand local markets.
Shipper	The company exporting the shipment. Use this to identify new potential suppliers or to explore the history of suppliers of interest.
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
Total Weight (KG) Quantity	Use this with measurement units to determine the declared quantity of the shipment.
Number of Packages	The quantity of packages involved in the shipment.
Item Number	Identifier for a piece of cargo as part of a larger shipment
Total FOB USD	Total FOB cost for all cargo in the shipment
Item FOB USD	FOB cost in USD
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
Provenance Country	Country where the shipper is based
Importer ID	Unique government identifier for the consignee
Declaration Number	Unique identifier for the shipment

Bolivia Export Data

Product	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and suppliers of specific products you are interested in
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand local markets.
Shipper	The company exporting the shipment. Use this to identify new potential suppliers or to explore the history of suppliers of interest.

HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
Total Weight (KG)	
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
Destination Country	The country where the cargo is to be delivered
Customs	The customs office that received the shipment

Chile Data

Chile Import Data

Product Description	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and supplier of specific products you are interested in
Variety	Brand/model identifier for the shipment
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand local markets.
Arrival Date	The date the shipment arrives within the Customs territory of the country.
Gross Weight (KG)	Weight of the shipment including pallets, netting and any other items needed to ship the cargo
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
Unit	Together with Quantity, gives the unit of measure for the shipment
Brand	Declared brand name of the products being shipped. Useful for uncloaking overseas factories, shell suppliers and supply chains
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
Total FOB (USD)	Declared FOB cost
Pay Type	Payment collection arrangement for the shipment
Incoterms	Incoterms are a set of standards that define the assignment of shipping responsibilities between the buyer and seller. Use this information to see Incoterms arrangements previously supported by companies you are examining
Total Freight (USD)	Declared Freight Cost
Total Insurance (USD)	Total freight insurance cost
Total CIF (USD)	Total CIF cost for all cargo in the shipment.
Tax (%)	Tax rate
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
HS Code Description	See HS Code
Transportation Company	The carrier or freight forwarder managing the transit of the shipment.
Transportation Type	The method of transport used for shipping goods. Use this to determine how each shipment arrives to its destination.
Destination Country	The country where the cargo is to be delivered

Customs	The customs office that received the shipment
Package Type	Describes how the products being shipped were packaged for transport. Useful for looking at bulk goods that can be shipped in cartons, gallons, bales, etc. Can also be used to determine if shipper is able to palletize shipments
Load Type	How the cargo was loaded. Can be containerized (general), loose,
Control ID	Unique identifier for the shipment
Declaration Number	Unique identifier for the shipment
Importer ID	Unique government identifier for the consignee
Trading Country	Country where the shipment originated
Country of Departure	The last country that the shipment's vessel visited before arriving at the destination country.
Port	Port where the shipment arrived
FOB (USD)	Freight on Board: The cost of the goods on the shipment. You can use this to assess the cost when importing/exporting similar products.
CIF (USD)	Cost, Insurance, Freight: The combined FOB Cost, Transportation, and Insurance. Use this to gauge the total cost of transportation for both you and your competitors' shipments.

Consignee Address	Declared address of the consignee
Shipper	The company exporting the shipment. Use this to identify new potential suppliers or to explore the history of suppliers of interest.
Shipper Address	The address of the overseas company exporting the shipment. You can use this to locate and verify the location of the suppliers you're appraising.
Arrival Date	The date the shipment arrives within the Customs territory of the country.
Total Weight (KG)	Total Weight (KG)
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
Unit of Measure	Together with Quantity, gives the unit of measure for the shipment
CIF (USD) Value	Cost, Insurance, Freight: The combined cost of the Freight on Board, Transportation, and Insurance. Use this to gauge the total cost of transportation for both you and your competitors' shipments.
CIF (USD) Unit Value	CIF Value divided by how many individual units were in the shipment
Consignee City	Declared city of the consignee
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
Port	Port where the shipment arrived

Mexico Export Data

HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
HS Code Description	See HS Code
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand

	local markets.
Consignee Address	Declared address of the consignee
Shipper	The company exporting the shipment. Use this to identify new potential suppliers or to explore the history of suppliers of interest.
Shipper Address	The address of the overseas company exporting the shipment. You can use this to locate and verify the location of the suppliers you're appraising.
Total Weight (KG)	Total Weight (KG)
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
Unit of Measure	Together with Quantity, gives the unit of measure for the shipment
Port	Port where the shipment arrived
Shipper City	City where the shipper is based

Panama Data

Panama Import Data

Product Description	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and supplier of specific products you are interested in
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand local markets.
Unit	Together with Quantity, gives the unit of measure for the shipment
Arrival Date	The date the shipment arrives within the Customs territory of the country.
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
FOB (USD)	Freight on Board: The cost of the goods on the shipment. You can use this to assess the cost when importing/exporting similar products.
Freight (USD)	Total cost of freight for the shipment. Use this to estimate shipping costs for similar shipments and to get a look into your competitor's costs
Insurance (USD)	The cost of insuring the commodities involved. Use this to get an idea of how much insuring certain products will cost when shipped.
CIF (USD)	Cost, Insurance, Freight: The combined FOB Cost, Transportation, and Insurance. Use this to gauge the total cost of transportation for both you and your competitors' shipments.
Gross Weight (KG)	Weight of the shipment including pallets, netting and any other items needed to ship the cargo
Net Weight	Weight of the shipment excluding pallets, netting and any other items needed to ship the cargo
Destination Country	The country where the cargo is to be delivered
Declaration Number	Unique identifier for the shipment
Importer ID	Unique government identifier for the consignee
Transportation Type	The method of transport used for shipping goods. Use this to determine how each shipment arrives to its destination.
Customs	The customs office that received the shipment
Custom Agent	The customs office that received the shipment
Total FOB (USD)	Declared FOB cost

Total CIF (USD)	Total CIF cost for all cargo in the shipment.
Number of Packages	The quantity of packages involved in the shipment.

Panama Export Data

Product Description	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and supplier of specific products you are interested in
Shipper	The company exporting the shipment. Use this to identify new potential suppliers or to explore the history of suppliers of interest.
Unit	Together with Quantity, gives the unit of measure for the shipment
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
Country of Origin	Country of origin information can be used to estimate things like taxes, tariffs and duties. Use this to see if your competitors are benefitting from special trade arrangements with certain governments
FOB (USD)	Freight on Board: The cost of the goods on the shipment. You can use this to assess the cost when importing/exporting similar products.
Gross Weight (KG)	Weight of the shipment including pallets, netting and any other items needed to ship the cargo
Net Weight	Weight of the shipment excluding pallets, netting and any other items needed to ship the cargo
Destination Country	The country where the cargo is to be delivered
Declaration Number	Unique identifier for the shipment
Transportation Type	The method of transport used for shipping goods. Use this to determine how each shipment arrives to its destination.
Customs	The customs office that received the shipment
Custom Agent	The customs office that received the shipment
Total FOB (USD)	Declared FOB cost
Number of Packages	The quantity of packages involved in the shipment.

Paraguay Data

Paraguay Import Data

Product Description	Declared contents of the shipment. Use this together with ImportGenius aggregation tools to find key importers and supplier of specific products you are interested in
Brand	Declared brand name of the products being shipped. Useful for uncloaking overseas factories, shell suppliers and supply chains
Consignee	Names and address of the business that received the shipment. You can use consignee information to prospect new leads, discover competitors, understand local markets.
Shipper	The company exporting the shipment. Use this to identify new potential suppliers or to explore the history of suppliers of interest.
Arrival Date	The date the shipment arrives within the Customs territory of the country.
Gross Weight (KG)	Weight of the shipment including pallets, netting and any other items needed to ship the cargo
Quantity	Use this with measurement units to determine the declared quantity of the shipment.
HS Code	An internationally recognized system for classifying import and export commodities, usually used for tariff regulation. You can also use HS Codes for trade statistics and economic research.
